

0008      Claim or Claims

What I claim as my invention is the fabrication of a sheet metal container with roofing system compatible pads on the bottom and planted with drought resistant vegetation to be used for the purpose of economically covering roofs with vegetation.

I further claim that the use of 22 gauge galvalume sheet metal for the container of modular roof greening products to be unique to my invention.

Additionally, I claim the sheet metal configuration of my invention to have novel functionality not present in any available product.

In conclusion, I claim that the use of roofing system specific walk pad material, procured from various manufactures, as the material the container rests on that comes in physical contact with the roofing system, affords roof system compatibility and warranty integrity unique to my invention.
